Métis Product Screen Set Summary

Structural overview of the product screen set and its relationship to the finalized visual system.

Important Clarification

The mockups in the screen pack are structural wireframes that define layout, screen purpose, and module responsibilities. They are not the final high-fidelity visual authority; final visual authority comes from the approved assets in 06-brand-assets and the finalized brand and UI docs.

ID	Screen	Primary Purpose
01	Login / Access Gate	Provide a secure and confidence-building entry point into the platform.
02	Dashboard	Summarize active investigations, key intelligence activity, alerts, and recent movement across the
03	Investigations List	Provide a structured list of investigations with sortable operational context.
04	Investigation Detail	Act as the primary single-case workspace that joins entity, source, timeline, graph, and findings co
05	Graph Explorer	Support active relationship discovery, pattern review, and graph traversal.
06	Entity Profile	Present the structured record of an entity with connected relationships and evidence.
07	Source Directory	Provide source inventory, visibility, and source quality management.
08	Source Detail	Show a single source record with provenance, linked evidence, and extracted entities.
09	Timeline View	Present temporal activity across an investigation for correlation and sequencing.
10	Reports List	Organize generated and draft intelligence reports for retrieval and export.
11	Report Builder	Allow analysts to assemble a report from investigation outputs and approved layouts.
12	Alerts Queue	Provide triage and review for alerts generated by the system.
13	Analytics	Present operating metrics, investigation throughput, signal volume, and usage patterns.
14	Settings / Administration	Provide governance, user/workspace settings, and system controls.

Coverage

Taken together, the screen set covers intake, investigation management, graph analysis, source review, alerts, analytics, reports, and administration. This is sufficient to begin a UI implementation when paired with the architecture and design-system documentation.
